EDUCATION

Gonzaga University, Spokane, WA

BS Computer Science, Math Minor

Graduated **May 2020** • **3.91 GPA**

EXPERIENCE • C++ • SQL • HTML/CSS • JavaScript/React

Software Engineering Intern, Chief Architect Software, Coeur D'Alene, ID

Summer 2019

- Worked on the desktop version of an architectural design software
- Implemented changes based on user feedback and requests
- Designed user interfaces using QT and QT Designer
- Created new tools for materials management, virtual reality house exploration, and lighting for renders
- Reduced or removed inconsistent and impractical restrictions on user actions

Software Engineering Intern, Faithlife Corporation, Bellingham, WA

Summer 2018

- Worked with a full-stack Agile/Scrum team on a new web-based donation service for churches
- Added option for churches to allow donors to cover donation processing fees, which entailed database modifications, a new API endpoint, tests, and front-end additions to the payment page and gift summary pages
- Led a team of interns and full-time employees to win the Shipping Award during the company-wide Hackathon by improving the accessibility of an existing messaging feature
- Presented frequently during weekly demo-days about interesting bugs, project/feature updates, etc

PERSONAL/INDEPENDENT PROJECTS

ML Elbow Location Inference for VR • Python, Keras

Undergraduate Thesis

- Seeks to use machine learning to outperform inverse kinematics for estimating elbow location for virtual reality applications
- Machine learning models are designed in Keras and trained on motion capture data from Carnegie Mellon University until data can be collected from VR devices

VR Visualization of Roadway Designs • C#, Unity

Senior Design Project

- Allows urban designers and educators to design roads with an emphasis on communicating scale and presence through virtual reality
- Roadway design occurs entirely within VR

Markov Chain Name Generator • C++

Personal Project

- Utilizes Markov chains to find patterns in existing names retrieved from U.S. Census data
- Produces new names that are not included in the input names
- Given a starting string, names beginning with the string will be generated

CLASS PROJECTS

Othello AI • Python

Artificial Intelligence

- Makes decisions based on a time limited alpha-beta pruning algorithm
- Simple command line interface, with a visual representation of the board in color
- Contains undo and redo move commands to aid in competitive matches

Custom Language Interpreter with C++ Transpiler • Python, C++

Organization of Prog. Langs.

- Implemented a parser, type checker, interpreter (etc) for a made-up language (MyPL) from provided specifications
- Designed and implemented a complete MyPL to C++ transpiler to serve as a compiler

EXTRACURRICULARS

- GUTS (Improv comedy club) *2016-2020*
- Speech and Debate *2012-2016*
- Knowledge Bowl (Organized competitive trivia) *2014-2016*
